# Why Work With the OpenSSL Corporation

The OpenSSL Library is developed within the OpenSSL Project, with contributions from companies and individual developers across the ecosystem.

The OpenSSL Corporation provides the majority of funding for project-paid development work, supporting the engineers responsible for maintaining and evolving the OpenSSL Library.

In 2025, the OpenSSL Corporation authored more than two-thirds of all project-funded contributions to the OpenSSL Library.

Support Contracts Fund Everything

Commercial support contracts fund all the activities of the OpenSSL Corporation, including external organization support, FIPS 140-3 validation efforts, feature development, bug fixing, security issue response, and financial support for the OpenSSL Foundation, the OpenSSL Conference and community engagement

Why This Matters

- Direct access to OpenSSL Library maintainers
- Authoritative lifecycle guidance
- Maintainer-level vulnerability response
- No third parties between you and the critical code you depend on

Where Support Goes

- Full-time OpenSSL Library engineers
- Security reviews and coordinated disclosures
- Long-term maintenance and backports
- FIPS 140-3 validation programs
- Community engagement and collaboration
- Research and development
